

INTERNATIONAL PETROLEUM STATISTICS REPORT

September 1997

**Energy Information Administration
Energy Markets and Contingency Information Division**

Preface

The International Petroleum Statistics Report is a monthly publication that provides current international oil data. This report is published for the use of Members of Congress, Federal agencies, State agencies, industry, and the general public. Publication of this report is in keeping with responsibilities given the Energy Information Administration in Public Law 95-91 (Section 205(a)(2)) that states:

"The Administrator shall be responsible for carrying out a central, comprehensive, and unified energy data and information program which will collect, evaluate, assemble, analyze and disseminate data and information ..."

The International Petroleum Statistics Report presents data on international oil production, demand, imports, and stocks. The report has four sections. Section 1 contains time series data on world oil production, and on oil demand and stocks in the Organization for Economic Cooperation and Development (OECD). This section contains annual data beginning in 1985, and monthly data for the most recent two years. Section 2 presents an oil supply/demand balance for the world. This balance is presented in quarterly intervals for the most recent two years. Section 3 presents data on oil imports by OECD countries. This section contains annual data for the most recent year, quarterly data for the most recent two quarters, and monthly data for the most recent twelve months. Section 4 presents annual time series data on world oil production and oil stocks, demand, and trade in OECD countries. World oil production and OECD demand data are for the years 1970 through 1996; OECD stocks from 1973 through 1996; and OECD trade from 1986 through 1996.

Data for the United States are developed by the Energy Information Administration's (EIA) Office of Oil and Gas. Data for other countries are derived largely from published sources, including International Energy Agency publications, the EIA International Energy Annual, and the trade press. (See sources after each section.) All data are reviewed by the International Statistics Branch of EIA. All data have been converted to units of measurement familiar to the American public. Definitions of oil production and consumption are consistent with other EIA publications.

General information about this publication may be obtained from W. Calvin Kilgore, Director, Office of Energy Markets and End Use, (202) 586-1617, and from Mark E. Rodekohr, Director, Energy Markets and Contingency Information Division, (202) 586-1130. Detailed questions and comments concerning the contents of the International Petroleum Statistics Report may be directed to Louis D. DeMouy, Chief, International Statistics Branch, (202) 586-6557; Patricia A. Smith (202) 586-6925, H. Vicky McLaine (202) 586-9412 or to Michael J. Grillot (202) 586-6577; Oil Market Chronology - Douglas MacIntyre (202) 586-1831.

Notes: As of December 31, 1994, Gabon withdrew its membership in the Organization of Petroleum Exporting Countries (OPEC). For consistency, Gabon is excluded in the historical series of OPEC totals.

Oil Market Chronology - August 1997

The following chronology lists international events of potential significance for world petroleum markets. Sources include: Dow Jones (DJ), the New York Times (NYT), and the Wall Street Journal (WSJ).

August 1 Azerbaijan signs production-sharing contracts with Chevron Corporation, Exxon Corporation, Mobil Corporation, and Amoco Corporation. Officials from Azerbaijan value the Caspian Sea projects at more than \$10 billion. Mobil will develop the Oguz exploration area, Chevron the Zeynabdin Tagiyev area, Exxon the Nakhchivan area, and Amoco the Inam Prospect. (WSJ)

United Nations Secretary-General Kofi Annan approves Iraq's request to add the Iraqi-Syrian border as an entry point for food and humanitarian aid under the oil-for-food program. The request provides further evidence of re-established official ties between the two countries. Ties were severed after Syria supported Tehran during the Iran-Iraq war, and this new link between Iraq and Syria follows the reopening in mid-June of three border points that were shut in 1980. (DJ)

Mobil Corporation announces a favorable \$78.3 million judgement in litigation with the federal government. The lawsuit involved Mobil's offshore North Carolina federal Outer Continental Shelf oil and gas leases. The company said that the judgement recognizes Mobil's right to terminate five Outer Continental Shelf leases, and recover the purchase price. Mobil sued the federal government in 1992 for the government's failure to allow development of certain oil and gas leases offshore Alaska, Florida, and North Carolina. The Alaska and Florida parts of the litigation were settled in 1995. (DJ)

Russia annuls a \$1 billion oil deal with Azerbaijan in support of Turkmenistan's protest that the deal is illegal. On July 4 Russia's Rosneft and Lukoil signed a deal with Azerbaijan's Socar to develop the Kyapaz field at the edge of Azerbaijan's zone in the Caspian Sea. The Turkmen government protested claiming the field, which Turkmenistan calls Serdar, as its own. (DJ)

August 2 Shell Netherlands B.V., a unit of Royal Dutch/Shell Group, unexpectedly shuts down part of Europe's second largest oil refinery. A company spokesperson indicated that the unit at Shell's Pernis refinery near Rotterdam could be closed all month, but did not give a reason for the shutdown. (NYT)

August 4 Mohammad Khatami, a cleric viewed as moderate, is sworn in as Iran's new president. (DJ)

In Colombia, Occidental Petroleum, a California-based international oil company, and Ecopetrol, Colombia's national oil company, declare *force majeure* on all oil exports from the Cano Limon field. The declaration comes after a series of attacks dating back to July 30 knocked out a major oil pipeline transporting oil from the field to the Caribbean port of Covenas. The pipeline has been attacked 45 times this year which is equal to the total number of attacks for 1996. Responsibility for the attacks has not been determined, but leftist guerrillas from the National Liberation Army are usually blamed for such attacks. The *force majeure* declaration does not apply to the oil contained in the 2 million barrel storage facility at Covenas. (DJ)

United Nations (U.N.) Secretary-General Kofi Annan approves a revised Iraqi aid distribution plan under the U.N. oil-for-food program. The oil-for-food program allows Iraq to sell approximately \$2 billion of crude oil every six months. Sale periods are divided into two 90-day intervals. The proceeds from the oil sales are paid into a U.N.-run escrow account from which humanitarian supplies are purchased for the Iraqi people. The program went into effect in December 1996 and was renewed for another six months on June 8, 1997. However, since late May 1997, Iraq has refused to sell any oil until the U.N. approved the revised aid distribution plan which is designed to speed up the procedure for approving shipments of humanitarian goods. The next step for Iraq is to gain U.N. approval of an oil pricing formula, and then the U.N. must approve purchase contracts from buyers. Following these two approvals, Iraq can resume its oil exports. Iraq has until September 5, 1997 to sell \$1.07 billion of oil under the current 90-day period. (DJ)

August 5 Mobil reveals that production at Nigeria's 100,000 barrel per day Oso condensate field has been completely shut-in since the previous week to repair faults in the gas reinjection wells. Bolts securing one offshore injection wellhead sheared, and as a precaution, Mobil decided to replace all the bolts securing offshore injection wellheads. Officials expect delays to Oso condensate loadings, but could not specify how many days' cargoes would be delayed. (DJ)

August 6 Nigeria's government releases \$145 million to the state petroleum corporation to begin repair work on its oil refineries. All four of the country's refineries were either closed or had production severely reduced in May due to maintenance problems. These problems have forced Nigeria to import oil to meet domestic needs, despite its position as the world's sixth-largest producer of crude oil. Repairs are expected to begin October 1 and take at least 60 days. (DJ)

August 7 Romanian Prime Minister Victor Ciorbea announces the closure of three of the country's nine oil refineries. Petrotel, Vega, and Darmanesti will close immediately in order to reduce a surplus of oil refining capacity and cut government spending. (DJ)

Exxon Corporation confirms that it has been chosen as sole foreign partner in a proposed multi-billion-dollar project to expand oil refining and build a major petrochemical plant in Fujian province, China. The joint project, involving Exxon and Fujian Petrochemical, includes increasing oil refining capacity at Xiaocuo from 80,000 barrels per day to 240,000 barrels per day and constructing a 600,000-metric-ton-per-year ethylene plant. In addition, the plant will include a 450,000-ton-per-year polyethylene plant and a 300,000-ton-per-year polypropylene plant. Exxon has a 50 percent share in the joint venture. (DJ)

Nova Corporation, a Canadian natural gas services and petrochemicals company, officially opens the GasAndes pipeline. The pipeline will initially transport 140 million cubic feet per day of natural gas from Argentina to Chile. The volume will increase to 250 million cubic feet per day by fall 1998. The new pipeline will supply three new gas-fired power plants in Chile that are set to open in October 1997, spring 1998 and fall 1998. The power plants are part of a program to improve the air quality in the Chilean capital, Santiago, by switching from coal-fired to natural gas-fired electrical generation. Nova holds a 56 percent interest in the GasAndes project. (DJ)

August 8 The United Nations approves a sale-price formula for Iraqi crude oil sales under the oil-for-food plan. The approval cleared the way for Iraq to resume limited oil exports immediately through the Turkish port of Ceyhan on the Mediterranean Sea and Iraq's Gulf port of Mina al-Bakr. The United Nations will also begin reviewing contracts for Iraqi crude oil purchases. Iraq has until September 5 to raise the \$1.07 billion allowed under the existing 90 day oil-for-food plan window. Iraqi officials state they will boost exports to 2 million barrels per day to meet the sales target. However, industry experts say that Iraq's export capacity is untested beyond 1.4 million barrel per day. (DJ)

Shell Nigeria announces that it expects to produce 7 percent to 8 percent less oil than had been originally planned for 1997. Officials cite a reduction in hard currency available to its joint venture partners as the reason for the decrease. A cutback in production would reduce output by approximately 70,000 barrels per day to 856,000 barrels per day. (DJ)

August 11 Colombia's national oil company, Ecopetrol, lifts the *force majeure* declaration on all oil exports from the Cano Limon field. A company spokesman states that crews completed repairs to the Cano Limon-Covenas pipeline on Saturday August 9 and that normal operations have resumed. (DJ)

August 12 A spokesman for Saga Petroleum ASA announces that oil production from the Snorre oil field in the Norwegian sector of the North Sea has been restarted and that it should return to full production within a day. A restart date for the Vigdis field, which was also shut down, has not been set. Production at the two fields was stopped on August 11 following the discovery of a production fault. Snorre produces 200,000 barrels per day while Vigdis has been gradually working towards 40,000 barrels per day following repairs to the gas compressor. (DJ)

Exxon Corporation shuts down a catalytic cracking unit at its refinery in Baytown, Texas because of an unspecified operating problem. Exxon declined to say when the unit, which produces more than 100,000 barrels per day of gasoline components, is expected to return to service. (NYT)

August 14 Stefan Balabanoff, acting head of economics and finance in the OPEC research division, predicts that OPEC's share of the world oil market will rise from a current level of about 40 percent to 52 percent by 2020. Balabanoff estimates that OPEC's production capacity must rise to 50 million barrels per day to meet the increased demand. From 1995 to 2000 he sees oil demand increasing by an average of 2.1 percent per year and from 2000 to 2010 demand is forecast to rise by 1.4 percent per year. Asian and Pacific countries are predicted to lead the increases in demand. In addition, Balabanoff forecasts growth for non-OPEC supply centered on the North Sea, non-OPEC developing countries, and the Commonwealth of Independent States. (DJ)

August 18 Three international groups confirm that they plan to bid on Petroleos Mexicanos' (Pemex) Cantarell project in the Yucatan peninsula. Pemex, the Mexican state-owned oil monopoly is seeking to boost oil production by injecting nitrogen into the terrain of Campeche state and into the sea floor beneath Campeche Bay in the Gulf of Mexico. Dresser Industries Inc. of Dallas will submit a joint bid with U.S. companies Marathon Oil and Praxair Inc., Nova Gas International of Canada, and Bufete Industrial of Mexico. Shell Oil Company entered a joint bid with Enron Corporation and Air Products and Chemicals Inc., both from the U.S., and Japan's Mitsui and Company. The third group is led by BOC Group PLC of Britain. Industry officials estimate the price of the project at \$950 million. (WSJ)

A spokesman for Saga Petroleum ASA reports that production at the Vigdis oil field in the Norwegian section of the North Sea was restarted despite the absence of a replacement gas seal. A temporary measure of transferring gas from the field to the Snorre field for processing enabled the company to restart Vigdis. The replacement seal is in production and scheduled to be completed by August 25. (DJ)

August 20 The Iranian parliament, the Majlis, confirms all 22 of President Mohammad Khatami's nominations for his cabinet. The confirmations are seen as a strengthening of Khatami's mandate to move towards a less strict society and a weakening of the hard-liners' power base in parliament. One of the nominees has advocated direct talks with the United States. *Editor's note: The new Iranian Oil Minister is Bijan Namdar Zanganeh.* (DJ)

Mexican President Ernesto Zedillo inaugurates the first U.S.-originated natural gas delivery to the Mexican state of Baja California. The new gas distribution system in Mexicali, the state capital just across the United States border, is the first under the Mexican government's natural gas privatization program. A binational consortium comprised of Enova International, Pacific Enterprises International and Proxima Gas, S.A. de C.V. will distribute the gas for the next 30 years. The deal is valued at \$20 million over the first three years for the supply more than 10 billion cubic feet of gas. (DJ)

The Saudi Arabian Oil Company (Aramco) shut down its 300,000-barrel-per-day oil refinery on the Persian Gulf for maintenance. Aramco expects the shutdown to continue until September 17. Reports suggest that the shutdown will result in the release of extra supplies of Arab Light and Extra Light crude oil for export in August and September. (DJ)

YPF SA, an Argentine energy company, and Amoco Corporation sign an agreement to operate U.S. natural gas fields with estimated reserves of 989 billion cubic feet of gas. YPF reveals that the joint venture includes 2,000 productive wells in the Texas Panhandle and western Oklahoma, two processing plants with combined daily capacity of 230 million cubic feet of gas, a 932-mile distribution system and 889,560 acres of leased land for exploration. The companies have set up a 50-50 holding company called Crescendo Management LLC to operate the joint venture. (DJ)

August 21 The United Nations approves the pricing formula for September crude oil exports under the United Nations/Iraq oil-for-food sale. Shipments of Iraqi Kirkuk crude oil headed for Europe will increase 20 cents per barrel, and shipments of Basrah Light crude oil to the Far East and United States, as well as Kirkuk crude oil to the United States, will increase 10 cents per barrel. (DJ)

August 22 An analyst with Calgary's First Energy Capital Corporation reports that western Canada's natural gas production is declining for the first time in many years and that demand could outstrip supply soon. In addition, the analyst estimates that natural gas reserves in western Canada are declining between 17 percent and 18 percent per year. Ontario Hydro's recent decision to close seven of nineteen nuclear power plants could increase the demand for western Canadian natural gas thereby exacerbating the potential shortage. (WSJ)

August 26 Enterprise Oil announces that it has received approval from the British government for a development plan for the Pierce Field in the central North Sea. The company expects the first oil from the field in August 1998 with an initial rate of production of 20,000 barrels per day. Enterprise expects a continuous rate of 45,000 barrels per day shortly thereafter. In addition, Enterprise reveals that it completed a deal with British Petroleum which increases its stake in the Pierce Field to 75 percent. (DJ)

China plans to spend \$600 million combining onshore and offshore exploration activities at its biggest offshore oil field, Suizhong 36-1 in Bohai Bay. The Bohai Oil Company will build facilities for oil and gas processing, storage, and marketing as well as a new oil berth. Suizhong 36-1 covers 18.5 square miles and has proven oil reserves of 2.1 billion barrels. (DJ)

The leader of Norway's oil workers union, Terje Nustad, said that the union plans to expand a strike already affecting five oil rigs on the Norwegian continental shelf. The expansion will start after September 10 and will include the West Epsilon rig, the Transocean rig, and the Poly Saga rig. Approximately 340 oil workers went on strike August 24 after rejecting a 7.8 percent raise offered by the Norwegian Shipowners' Association. The strike has not slowed daily oil production because the five affected rigs are mainly used for drilling new wells. However, if the strike is expanded, the annual maintenance stoppage at Statfjord B in the North Sea could be extended. Moreover, the restart of Norne field production, scheduled for September, could be delayed. (DJ)

August 27 Consulting firm Arthur Anderson reports that world oil companies increased spending on U.S. exploration and development to \$21.6 billion in 1996, an increase of 24 percent over 1995. Major oil companies spent \$11.1 billion in the U.S., a 13 percent increase, while independent companies spent \$10.5 billion, a 37 percent increase. Royal Dutch/Shell Group, Texaco Inc., and Amoco Corporation led the major companies in 1996 U.S. exploration expenditures. Independent spending leaders were Union Pacific Resources Group Inc., Burlington Resources Inc., and Enron Oil & Gas Company. (WSJ)

The United Nations Security Council announces that it will discuss a possible rollover of Iraqi oil sales from the current 90-day period to the second 90-day period under the renewed oil-for-food program. The existing six month period of the oil-for-food program began on June 8, 1997, but Iraq stalled on the oil sale until mid-August 1997. The delay makes it impossible for Iraq to sell \$1.07 billion of oil during the first 90-day period which is set to end on September 5, 1997. If the rollover gains approval, it could prevent Iraq from losing an estimated \$400 million in sales because of the late start. (DJ)

August 28 Russian officials annul a high-profile deal with Exxon Corporation to develop huge oil deposits in Russia's far north. Late last year Exxon's affiliate, Exxon Arkhangelsk, beat out several international consortia for a 50 percent stake in oil fields in the Timan-Pechora province. Russian officials cite five undisclosed violations committed by Exxon during the tender process as the reason for scrapping the agreement. Some analysts suggest that the cancellation of this \$1.5 billion investment project could shake investor confidence in Russia's energy sector and may deter private investment in Russia. (DJ)

August 29 A spokesman for Enterprise Oil confirms that production at Enterprise's North Sea Nelson oil field is to be halted at midnight while an unexploded World War II bomb is removed from close to the Nelson pipeline. The work may take as many as five days to complete; however, Enterprise hopes to restart production on September 1. Normal production from the field is 160,000 barrels per day. (DJ)

Russia and Turkey sign an agreement to build an underwater pipeline across the Black Sea to transport Russian natural gas to Turkey. The proposed 225-mile pipeline would run from the Russian port city of Tuapse to the Turkish port city of Samsun, and initially carry 280 billion cubic feet of gas. The amount will reportedly double by 2003. Construction of the pipeline is scheduled to start next year and is expected to be complete by 2000. (DJ)

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In July 1997, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 520 thousand barrels per day.

Notes: •OPEC=Organization of Petroleum Exporting Countries. •Monthly data are often preliminary and also may not average to the annual totals due to rounding.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. R=Revised data. E=Estimated. PE=Preliminary estimate. RE=Revised estimate.

Notes: *Monthly data are often preliminary and also may not average to the annual totals due to rounding. See Section 4 for historical series.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia. In July 1997, Neutral Zone production by both Kuwait and Saudi Arabia totaled about 520 thousand barrels per day.

R=Revised data.

Notes: •OPEC=Organization of Petroleum Exporting Countries. See Appendix A for countries in this group.

•Monthly data are often preliminary and also may not average to the annual totals due to rounding.

^{1/} Through December 1990, the data for Germany are for the former West Germany only. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

^{2/} "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

^{3/} U.S. geographic coverage is the 50 States and the District of Columbia.

^{4/} "Other" consists of Australia, New Zealand, and the U.S. Territories.

R=Revised data.

Notes: •The term Demand is used interchangeably with Consumption and Petroleum Products Supplied. See Appendix C for definition. •See Section 4 for historical series.

Sources: See end of Section 1.

Sources for Section 1 (Annual and Monthly Oil Data)

Crude Oil Production, Natural Gas Liquids Production, Other Liquids, and Refinery Gain

United States: Energy Information Administration (EIA), Petroleum Supply Annual 1996 and Petroleum Supply Monthly, August 1997.

Other Countries: Annual data -- EIA, International Energy Annual, various issues. Monthly data -- Canada -- Maclean Hunter Publishing Company, Oilweek, various issues. Denmark, Mexico, Netherlands, Norway, Germany, and all OPEC countries -- Petroleum and Energy Intelligence Weekly, Inc., Petroleum Intelligence Weekly, various issues. All Other Countries -- PennWell Publishing Company, Oil and Gas Journal, various issues. Refinery Gains: National Petroleum Council, U.S. Petroleum Refinery Study, October 1986.

Oil Stocks

United States: EIA, Petroleum Supply Annual 1996 and Petroleum Supply Monthly, August 1997.

Other OECD Countries: • Organization for Economic Cooperation and Development (OECD), Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Monthly Oil Statistics data base, 1985-1997.

Oil Demand

United States: EIA, Petroleum Supply Annual 1996 and Petroleum Supply Monthly, August 1997.

Other OECD Countries: • OECD, Quarterly Oil Statistics and Energy Balances, various issues. • OECD, Monthly Oil Statistics data base, 1985-1997.

^{1/} Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gains, alcohol, and liquids produced from coal and other sources.

^{2/} U.S. geographical coverage is the 50 States and the District of Columbia. See Explanatory Note 1 in Appendix B.

^{3/} The term Demand is used interchangeably with the terms Consumption and Petroleum Products Supplied. See Appendix C for definition.

^{4/} Stock draws are positive numbers, stock additions are negative numbers.

^{5/} This is computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw.

NA = Not Available.

Note: Sum of components may not equal total due to rounding.

¹/ U.S. geographic coverage is the 50 States and District of Columbia.

²/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

³/ The data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •"Persian Gulf" consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. •Negative numbers represent net exports.

•A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day. •See Section 4 for annual data.

¹/ Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1970 through 1989 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

P=Preliminary.

Notes: •OPEC=Organization of Petroleum Exporting Countries.

^{1/} Other is a calculated total derived from the difference between "World" and the sum of production in "Total OPEC" (Table 1.1a) and all other countries listed (Tables 1.1b and 1.1c). The total "North Sea" is not subtracted from the world total, though Norway and the United Kingdom have been subtracted.

-- = Not applicable. P=Preliminary.

^{1/} Includes about one-half of the production in the Kuwait-Saudi Arabia Neutral Zone from 1980 through July 1990 and beginning in June 1991. Kuwaiti Neutral Zone output was discontinued following Iraq's invasion of Kuwait on August 2, 1990, but was resumed in June 1991. From August 1990 through May 1991, all production in the Neutral Zone was included in the data for Saudi Arabia.

1/ Data through December 1990 are for the former West Germany. Beginning with January 1991, the data for Germany are for the unified Germany, i.e., the former East Germany and West Germany.

2/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

3/ U.S. geographic coverage is the 50 States and the District of Columbia. In the United States in January 1975, 1981, and 1983, numerous respondents were added to bulk terminal and pipeline surveys affecting subsequent stocks reported. Using the new basis, the end-of-year U.S. stocks, in million barrels, would have been 1,121 in 1974, 1,425 in 1980, and 1,461 in 1982.

4/ "Other" consists of Australia, New Zealand, and the U.S. Territories.

P=Preliminary.

Note: Oil Stocks - See Explanatory Note 2 in Appendix B.

Sources: See end of Section 4.

¹/ U.S. geographic coverage is the 50 States and District of Columbia.

²/ "OECD Europe" consists of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, and the United Kingdom.

³/ Data through 1990 are for the former West Germany.

Notes: •Imports include crude oil, natural gas liquids, and refined products, and are on a direct basis. •OECD=Organization for Economic Cooperation and Development. See Appendix A for countries in this group. •"Persian Gulf" consists of Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates. •Negative numbers represent net exports. •A dash (-) indicates no trade. •Zeroes (.000) indicate net imports of less than 0.0005 million barrels per day.

•Data for 1995 are preliminary.

Appendix A

Organizational and Geographical Definitions

Appendix A. Organizational and Geographical Definitions

International Energy Agency (IEA) countries are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States.

Organization for Economic Cooperation and Development (OECD) countries are: Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom, and United States. Total OECD includes the United States Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). Total OECD excludes data for Czech Republic, Hungary, South Korea, and Mexico which are not yet available.

OECD Europe countries are: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Luxembourg, Netherlands, Norway, Poland, Portugal, Spain, Sweden, Switzerland, Turkey, and United Kingdom. OECD Europe excludes data for Czech Republic, Hungary, and Poland which are not yet available.

Organization of Petroleum Exporting Countries (OPEC) members are: Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. As of December 31, 1992, Ecuador withdrew its membership in OPEC, and as of December 31, 1994, Gabon withdrew its membership. For consistency, Ecuador and Gabon are excluded in the historical series of OPEC totals.

Arab members of OPEC are: Algeria, Iraq, Kuwait, Libya, Qatar, Saudi Arabia and the United Arab Emirates.

Organization of Arab Petroleum Exporting Countries (OAPEC) are: Algeria, Bahrain, Egypt, Iraq, Kuwait, Libya, Neutral Zone, Qatar, Saudi Arabia, Syria, Tunisia, and the United Arab Emirates. In April 1979 Egypt was suspended from OAPEC membership. In May 1989 Egypt rejoined OAPEC. For consistency, Egypt is included in the historical series of the OAPEC totals.

Persian (Arabian) Gulf countries are: Bahrain, Iran, Iraq, Kuwait, Qatar, Saudi Arabia, and the United Arab Emirates.

The term "Former USSR" is being used in the International Petroleum Statistics Report as a purely geographical expression, referring to the Commonwealth of Independent States (CIS), Georgia, and the three Baltic States (Estonia, Latvia, and Lithuania).

Appendix B

Explanatory Notes

Appendix B. Explanatory Notes

Note 1: World Oil Supply

Supply includes production of crude oil (including lease condensate), natural gas plant liquids, other hydrogen and hydrocarbons for refinery feedstocks, refinery gain, alcohol, and liquids produced from coal and other sources. Beginning in 1993, U.S. data includes fuel ethanol blended into finished motor gasoline and oxygenate production from merchant MTBE plants.

Note 2: Oil Stocks

The International Energy Agency (IEA) assembles and reports total oil stock data for the member countries of the Organization for Economic Cooperation and Development (OECD). Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. In its report titled Quarterly Oil Statistics and Energy Balances of OECD Countries, the IEA defines oil stocks as follows: "All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities." IEA data exclude "oil held in pipelines, rail and truck tank cars, sea-going ships' bunkers, service stations, retail stores and tankers at sea." Also the IEA defines the United States to be the 50 States and the District of Columbia, and the U.S. Territories (Guam, Puerto Rico, and the U.S. Virgin Islands). The Energy Information Administration (EIA) does not include the United States Territories in its statistical definition of the United States. Further, the EIA includes oil in oil pipelines as part of its stock data. Tables 1.5, 1.6, 2.3, and 4.4 include oil stocks for the United States according to EIA definitions. Using IEA definitions, at the end of March 1997 United States (including territories) oil stocks totaled 1,369 million barrels.

Note 3: A Change to the Oil Balance in Section 2.

Prior to August 1992, Section 2 of the International Petroleum Statistics Report presented a balance of oil supply, demand, and stock change for the Market Economies, at quarterly time intervals. The communist countries, or Centrally Planned Economies (CPEs) were not included in the balance, mainly because good quarterly data for oil demand in these countries were not available. Net imports from the CPEs were included in the balance as part of total Market Economies supply. At present, the former Soviet Union and most of the countries of Eastern Europe are in transition from communism to market economies; because of this there are no longer good political or economic reasons to publish an oil balance only for the countries that have traditionally been market economies. Beginning with the August 1992 edition, Section 2 of the International Petroleum Statistics Report was changed from a Market Economies oil balance to a world oil balance.

The main data issues related to this change may be summarized as follows:

Supply Data. Monthly oil supply data are available for all countries of the world. These data are used to generate Tables 1.1 to 1.4; they were used to expand the Section 2 supply table (Table 2.2) to the whole world.

Demand Data. EIA has now developed quarterly figures for world oil demand, including demand in the former CPEs; these are published in Table 4 of EIA's Short-Term Energy Outlook. The procedures involved in developing quarterly world demand numbers may be summarized as follows:

Complete monthly data are available for the 24 OECD countries. Annual demand data for all countries (about 200 countries) are presented in EIA's International Energy Annual. In 1993, the OECD accounted for about three-fifths of total world demand, the 25 largest consumers outside of the OECD accounted for about one-third of the world total, and the remaining countries (about 150 countries) accounted for less than one-tenth of the total. The key problem, therefore, is to develop good figures for the 25 largest consumers outside the OECD.

Of these 25 countries, by far the largest consumer is Russia, which in 1993 accounted for about one-sixth of the demand in the group of 25. The next largest consumer is China, which in 1993 accounted for about one-seventh of the demand in the group. Thus in 1993 Russia and China accounted for one-third of the demand in the group of 25. For these 2 countries, data are available on oil production and net exports. The demand numbers shown in Section 2 are computed as production minus net exports. This is the same procedure used in the EIA Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other respected publications that deal with international oil markets. Note, however, that this method of computing demand ignores both refinery gain and stock changes.

For other major consuming countries outside of the OECD, quarterly demand data are developed based upon the latest available annual data, analytic judgment about current trends, and some seasonal adjustments. These are the same procedures used for the Short-Term Energy Outlook.

Stocks Data. Reliable stocks data are available for the OECD countries. Estimates of stocks for export and afloat, and of commercial floating stocks, are available. (See sources at the end of Section 2.)

For on-land stocks outside the OECD, there is little reliable data. Most estimates of on-land stocks outside the OECD are based on the theory that stocks are approximately equal to some number of days of demand. Demand figures (which themselves involve some degree of estimation) are then used to compute estimates of stock levels.

In the International Petroleum Statistics Report, it had been the practice for some time to estimate that on-land stocks in the traditional market economies outside of the OECD were equal to 55 days of demand. This was acceptable, mainly because the rule was used only to estimate a relatively small part of total stocks (about 16 percent).

When Section 2 was converted from a Market Economies oil balance to a world oil balance, there were important changes in the conditions that made it reasonable to estimate on-land stocks outside of the OECD using the rule of 55 days of demand. When the CPEs are included, the stocks that must be estimated are a considerably larger part of the total. In 1990, total oil demand in the former CPEs was more than 80 percent as large as demand in all of the non-OECD traditional market economies. Thus the quantity of stocks that would have to be estimated using a 55-day rule would nearly double, and the estimated components of stock levels and stock changes would become relatively large parts of the total. One consequence of this is that the statistical discrepancy (as shown in Table 2.1) would become less useful as an indicator of the overall consistency of the data. The statistical discrepancy is computed from supply, demand, and stock change. If a large part of the stock change is estimated, then the statistical discrepancy loses much of its significance.

As already noted, quarterly demands in the former Soviet Union and in China are computed as production minus net exports. This computation implicitly assumes a zero stock change. Demand in the former Soviet Union is falling. If we were to use a 55-day rule to compute stock levels, falling demand would imply falling stock levels. This would contradict the assumption of zero stock change which was used in computing demand.

In view of all this, the following approach has been adopted. Table 2.3 now shows levels of stocks for the OECD countries, levels of stocks for export and afloat, and levels of commercial floating storage. Stock changes based on these stock levels are shown in Table 2.1. At this time, no other stock levels are shown. Table 2.1 now has a single line labelled "Other Stock Draw and Statistical Discrepancy", which contains the computed values needed to make the table balance.

It may become possible in the future to obtain reliable information on certain categories of on-land stocks outside the OECD. If such data become available, they will be added to Table 2.3, and the corresponding stock change information will be added to Table 2.1.

Changes in Formats and Sign Conventions. There were several changes in Section 2 to make the International Petroleum Statistics Report more consistent with other EIA publications, especially with the Short-Term Energy Outlook. The numbers were changed from 1 decimal place to 2 decimal places. The word "consumption", as used before August 1992, was changed to "demand". The sign convention for stock changes in Table 2.1 was changed. Stock draws are now indicated by positive numbers, and stock additions are indicated by negative numbers. Table 2.1 also uses a new sign convention for the line labelled "Other Stock Draw and Statistical Discrepancy". The values in this line are now computed as Total Demand minus the sum of Total Supply and Total Reported Stock Draw. This is the reverse of the sign convention used before August 1992.

Summary. Section 2 was expanded from a Market Economies oil balance to a world oil balance. Supply data are tracked for all producing countries. Demand data are tracked for the 24 OECD countries, and for 25 large consumers outside of the OECD. Demand for the remaining countries (less than 10 percent of total demand) is estimated, for years that are not yet available in the International Energy Annual. The stock levels in these tables are based on reported data for the OECD and for stocks at sea. The line in Table 2.1 labelled "Other Stock Draw and Statistical Discrepancy" is a balancing item.

Appendix C

Glossary

Appendix C. Glossary

Alcohol. The family name of a group of organic chemical compounds composed of carbon, hydrogen, and oxygen. The molecules in the series vary in chain length and are composed of a hydrocarbon plus a hydroxyl group. Alcohol includes methanol and ethanol.

Demand (Consumption/Petroleum Products Supplied). Total petroleum products supplied is the sum of all petroleum products supplied. For each product, the amount supplied is calculated by summing production, crude oil burned directly, imports, and net withdrawals from primary stocks and subtracting exports.

Crude Oil. A mixture of hydrocarbons that existed in liquid phase in underground reservoirs and remains liquid at atmospheric pressure after passing through surface-separating facilities. Crude oil production is measured at the wellhead and includes lease condensate.

Government-Owned Stocks. Oil stocks owned by the national government and held for national security. In the United States these stocks are known as the Strategic Petroleum Reserve.

Lease Condensate. A liquid recovered from natural gas at the well or at small gas/oil separators in the field. Consists primarily of pentanes and heavier hydrocarbons (also called field condensate).

Natural Gas Plant Liquids. Products obtained from processing natural gas at natural gas processing plants, including natural gasoline plants, cycling plants, and fractionators. Products obtained include ethane, liquefied petroleum gases, (propanes, butane, propane-butane mixtures, and ethane-propane mixtures), isopentane, natural gasoline, unfractionated streams, plant condensate, and other minor quantities of finished products, such as motor gasoline, special naphthas, jet fuel, kerosene, and distillate fuel oil.

Oil Stocks. Oil stocks include crude oil (including strategic reserves), unfinished oils, natural gas plant liquids, and refined petroleum products. See Explanatory Note 2.

Other Hydrocarbons. Other materials processed at refineries. Includes coal tar derivatives, hydrogen, gilsonite, and natural gas received by the refinery for reforming into hydrogen.

Oxygenates. Any substance which, when added to gasoline, increases the amount of oxygen in that gasoline blend. They include: Fuel Ethanol, Methanol, and MTBE (Methyl tertiary butyl ether).

Petroleum Products. Petroleum products are obtained from the processing of crude oil (including lease condensate), natural gas, and other hydrocarbon compounds. Petroleum products include unfinished oils, aviation gasoline, motor gasoline, naphtha-type jet fuel, kerosene-type jet fuel, kerosene, distillate fuel oil, residual fuel oil, ethane, liquefied petroleum gases, petrochemical feedstocks, special naphthas, lubricants, paraffin wax, petroleum coke, asphalt road oil, still gas, and other miscellaneous products.

Processing Gain. The amount by which the total volume of refinery output is greater than the volume of input for given period of time. The processing gain arises when crude oil and other hydrocarbons are processed into products that are, on average, less dense than the input.

Processing Loss. The amount by which the total volume of refinery output is less than the volume of input for given period of time. The processing loss arises when crude oil and other hydrocarbons are processed into products that are, on average, more dense than the input.

Appendix D

Estimation Procedures

Appendix D. Estimation Procedures

Estimation procedures are used for demand numbers in many of the countries outside of the OECD, in cases where data from EIA's International Energy Annual are not yet available. Demand numbers for 1995 and earlier years, for all countries, may be found in EIA's International Energy Annual 1995, published in December 1996, which is the most recent published edition of the International Energy Annual. EIA's WORLD ENERGY database contains final demand data for all countries of the world for 1994, and preliminary demand data for all countries for 1995. Instructions for downloading this database may be found on EIA's home page (<http://www.eia.doe.gov/emeu/world/contents.html>). The status of the demand numbers shown in Section 2 of this current International Petroleum Statistics Report may be summarized as follows.

The OECD demand numbers are, as usual, based on the latest Quarterly Oil Statistics and Monthly Oil Statistics tapes from the International Energy Agency.

For countries outside of the OECD, the following approach is used. The numbers for 1994 and earlier years match the demand numbers in the WORLD ENERGY database on EIA's home page. Numbers for 1995 forward are the best available EIA estimates, based upon the best annual data currently available, analytic judgment about current trends, and some seasonal adjustments. These are the same numbers that appear in the international oil balance table in EIA's Short-Term Energy Outlook.

The two largest non-OECD oil consumers are the former Soviet Union and China. For these two countries, published data are available on production and net exports. Demand is computed as production minus net exports. This is the same approach used in the Short-Term Energy Outlook, by the International Energy Agency in their Monthly Oil Market Report, and in other major publications dealing with international oil data. Note, however, that because of this computation, the demand numbers for the former Soviet Union and China implicitly exclude stock draw and refinery gain.

Appendix E

Conversions

Table E1. Refined Petroleum Products Conversion Factors

Product	Barrels per Metric Ton
Asphalt	6.06
Distillate Fuel Oil	7.46
Gasoline, Aviation	8.90
Gasoline, Motor	8.53
Greases	6.30
Jet Fuel, Kerosene-type	7.93
Jet Fuel, Naptha-type	8.27
Kerosene	7.73
Liquefied Petroleum Gas (LPG)	11.60
Lubricants	7.00
Miscellaneous Products	8.04
Naphthas	8.22
Natural Gas Liquids (NGL)	10.40
Natural Gasoline	10.00
Paraffin Oil	7.14
Paraffin Wax	7.87
Petrolatum	7.87
Petroleum Coke	5.51
Residual Fuel Oil	6.66
White Spirits	8.50
